Reverse string Using user defined function

Code

In [1]:
```python
string=input("Enter the string:")
def reverse():
    print(string[::-1])
reverse()
```

Enter the string:Hey! This is Parth Nikam.
.makiN htraP si sihT !yeH

Algorithm

1. START.
2. Define function reverse( ).
3. Through negative slicing print the string.
4. Call reverse( ).
5. STOP.

FlowChart

```
Start
```

```
define init( ) function for input of real and
imaginary number
```

```
define disp( ) function to display
real and imaginary number
```

```
Create object and call
function through object
```

```
Stop
```
